The long-range system

This system specializes to cover vast areas and locate the water up to depths up to 1200 meters below the surface of the ground and Front Range up to 2,000 meters.

The transmitter unit: the main unit of the device is placed on the ground in the middle of the area to be discovered and we installed the antenna of the transmitter signal to the main unit.

Then we turn on the device and select a language (for example English)
1. Connect the long range parts to the device.
2. Connect the handle to the device.
3. Connect the signal despatch.

The user should position themselves from the north to the self which is the best method to detect underground water and artesian wells.
THE DEVICE WORKS ON FOUR LANGUAGES

(GERMAN–ENGLISH–FRENCH–ARABIC)

Select the type of water

Choose the Front Range according to the area you want to reach. You can select between

(0500 – 1000 – 1500 – 2000) M

Increase the length of the signal recipient antennas to enable the device to detect the target even to 2000 meters.

After selecting the Front Range, the search screen will appear which contain an indicator, which will start to move, and the device will start to issue a beep sound, which is the signal.

Transmitter conforming that is the device work correctly.
After detecting the target, conform the target from for direction

To determine the depth of the discovered target, stand above the target and turn 45 degrees.
Walk straight ahead until the antenna reverses to the back.

www.gerdetect.de
Measure the distance between the antennas reversing back and the target center point.

The distance between the antennas reversing back and the center point is equal to the target depth.

For example, if the distance is 10 m the depth of the target is 100 M.

**Note:**

You should avoid using the machine during rain and must wait for 15 days at least after the rain stopped until the soil dries out then you can use the device.
